INTRODUCTION

Machine learning engineer / software developer based in London. Scholar of gastrointestinal motility variation. US Citizen & UK Tier 1 Exceptional Talent Visa.

technical summary

- 🔧 **Computer vision machine learning pipeline** , production [python / c++]
Deploying and optimizing large computer vision end-to-end processing pipeline using Pytorch, AWS Batch, SQS, PostgreSQL, and Redis:
Developing and optimizing large code base to improve runtime and significantly reduce costs. Deep learning-based global image feature extraction and large-scale image retrieval. Custom graph database deployment for geospatial image data used in pipeline to build 3D geometric models.
- 🔧 **Massively scaled graph database analytics** , production [scala / java]
Leveraging Cassandra and Spark (using Scala) for large-scale graph networks and analyses including:
Building tools to explore and analyze graph data in a distributed cloud-based cluster. Developing machine learning algorithms and automation of real-time entity resolution (data disambiguation) at scale. Dealing with 10^7 (eventually reaching 10^9) transactions daily utilizing Kafka and Spark Streaming to ingest massive amounts of data through an ETL pipeline. Revenue increase from \$1.8M to \$6.0M; internal investment by firm (\$0.5M) to generalize new capability based on client deliverable.
- 🔧 **Stochastic fluid transit model** , research [java / python]
Developed in Java to study the effects of physiological variations on drug transit, dissolution, and absorption. Pulsatile, non-deterministic approach. Application of a non-homogeneous Poisson process. Based on sampling from and imaging of small bowel free water content
- 📊 **Analysis of noisy gastrointestinal pressure signals** , research [python]
Wavelet-based peak detection and kernel density estimation. Machine learning, Gaussian process regression & PCA for signal classification. Completed in Python with SciPy/NumPy/SciKit packages
- 🔗 **Java interface for handling parameters and their values with syntax highlighting** , production [java]
Managing dynamic parameters that control processing pipeline
Parameters and database fields (JDBC Data_Port for MySQL); Pipeline source queue management and error handling

professional experience

- jan 20 - pres **Facebook** , data scientist
The Surreal LiveMaps team are building a large-scale mapping and localization pipeline that will allow camera devices to precisely identify their location and understand the environment, using computer vision. This will allow a variety of use cases, including AR wayfinding (navigating from A to B), Geo-located AR (anchoring 3D content to precise physical locations) and more intelligent, camera based AI assistants.
- aug 17 - jan 20 **Scape Technologies [acquired jan 20]** , principal data scientist
Building core data flow and analysis pipeline for location-based recognition, allowing devices to see and remember their surroundings & augment the world around them. Cloud side infrastructure allows ordinary mobile devices to enhance the world around them by overlaying digital items onto the physical world, both indoors and outdoors, using machine vision & artificial intelligence.
- aug 16 - jul 17 **Deloitte Consulting LLP** , senior data science consultant
Mission Analytics in Business Model & Transformation/Strategy & Operations. Supporting senior government executives in the development of the organization's strategy and business process; assisting in development, collection, analysis, and reporting of data by leverage big data and machine learning technologies; serving as domain knowledgeable resource in advising the Deloitte team and client on tools and techniques to improve workflow.
- jul 15 - aug 16 **U.S. Food and Drug Administration** , research fellow
Division of Quantitative Methods and Modeling in the Office of Research and Standards within the Office of Generic Drugs. Applying mathematical analysis to physiological/molecular based models for drug absorption, bioavailability, distribution and effectiveness. Using large data sets to improve the prediction and regulatory decision making for generic drugs.
- mar 06 - aug 07 **Department of Lunar & Planetary Sciences University of Arizona** , java developer
Developing open-source software for data analysis for the HiRISE instrument on the Mars Reconnaissance Orbiter. Co-funded by NASA and JPL.

education

- 2015 **Ph.D.** Pharmaceutical Sciences, University of Michigan
Dissertation: *Mechanistic Analysis and Quantification of Gastrointestinal Motility: Physiological Variability and Plasma Level Implications.*
- 2011 **M.Sc.** Pharmaceutical Sciences, University of Michigan
- 2009 **M.Sc.** Computational Biology, New York University
- 2006 **B.Sc.** Mathematics, University of Arizona
